Installation and Operating Instructions

Models: ND6 and ND8 (UL#'s 1712-60-0204 and 1712-80-0204) with separate control.

Nordic Deluxe Sauna Heaters

Read all instructions carefully before installation. Please leave all instructions and warranty with the owner.

WARNING
Prolonged exposure to elevated temperatures is capable of inducing hyperthermia. Hyperthermia occurs when the internal temperature of the body reaches several degrees above the normal body temperature of 98.6°F. The symptoms of hyperthermia include an increase in the normal temperature of the body, dizziness, lethargy, drowsiness, and fainting. The effects of the hyperthermia include failure to perceive heat, failure to recognize the need to exit the room, unawareness of impending hazard, fetal damage in pregnant women, physical inability to exit the room, and unconsciousness.

WARNING
The use of alcohol, drugs, or medication is capable of greatly increasing the risk of fatal hyperthermia.

Section 1: General Information

These heaters are UL approved for permanent installations and electrical connections. Built with splash proof construction, the conducting parts are protected against water. All wiring must be performed in accordance with local codes. See Diagram 2 for wire and room size requirements.

These heaters are wall mounted, 16W x 11D x 23H

WARNING
Do not take a sauna if using alcohol, drugs or medications.

Pregnant women or persons with poor health should consult their physician before using a sauna.

Caution fire hazard: Do not use the sauna room for drying clothes, bathing suits, etc. Do not hang towels above the heater or place any object other than rocks supplied on the heater. If any darkening of the wall around the heater is noticed discontinue sauna use immediately.

Inspect sauna regularly for required maintenance to heater, control and benches. Replace wood surfaces which show any signs of deterioration.

The heater gets extremely hot during operation and should not be touched or burns may result.

Minors should be adequately supervised whenever near a hot or warming sauna.
Installation and Operating Instructions

Recheck your distances from the heater to combustible materials to be sure you have the proper minimum distances.

! OBSERVING MINIMUM DISTANCES IS REQUIRED TO REDUCE FIRE HAZARD

Note 1: Use separate 120V branch circuit protected for 15 or 20 amps if control light switch is to be used.
Installation and Operating Instructions

Section 2: Mounting of Sauna Heater

HANGING THE HEATER Using the template provided, drill four 9/64" holes to fasten the heater to the wall. Install two 1/4" x 1 1/2" hex head lag screws (supplied with the heater) into the upper two holes. Tighten these screws until their heads are about 1/8" from the wall surface. The screws must be threaded through the wall into a framing member or backing board to support the heater weight. Hang the heater on the two upper screws. Locate the two 1/4" x 1" hex head lag screws (supplied with the heater) then install them into the two lower mounting holes. Tighten to lock the heater in place. See diagram 1 for the heater location details and the necessary clearances to combustible materials.

Section 3: Placing of Rocks (See Diagram #10)

The rocks supplied with the heater have been chosen to provide the best heater performance. Use of any other type of rock may void the heaters warranty. Never operate the heater without rocks in place! Rinse the rocks with water before placing in the heater. Carefully place the rocks loosely so that the air can circulate through the heater. Packing the rocks too tightly may cause the heater high limit switch to trip. The rocks must be fully cover the heating elements. Attach the guard with the screws provided.

Section 4: Electrical Hook-Up

Electrical installation must be made by a licensed electrician in accordance with the National Electrical Code and local regulations.

Remove the screws from the left and right sides of the electrical box. Remove the painted trim piece from the front of the box. Route the feed wires through the holes provided in the bottom of the heater and connect the wires to the terminal block. To determine the correct wire size, refer to Diagram 2. Use copper supply wire only, suitable for minimum 90 degrees C. The heater must be grounded! See Diagram 6 for proper connections.

Section 5: Temperature Sensor

Feed the “low voltage” sensor wire from the control to the sensor location. Sensor wire must be routed completely separate (as per low voltage electrical wiring codes) from any wiring carrying over 50 volts. It may be necessary to drill holes to string the wire through the studs or ceiling joists. Route wires into control box and connect to terminals #2 and #3 at the thermostat terminal block. Using a flat tip screwdriver, unsnap sensor cover from sensor. Mount sensor to finished wall directly above heater five (5) inches down from ceiling using two (2) screws (provided) as shown in Diagrams 1.3 & 5.

Section 6: Heater Screen (Guard rail)

Install a wooden heater guard to prevent the sauna bather from accidentally touching the sauna heater. Install the heater guard rail with the dimensions shown in Diagram 8.

WARNING

Fire sprinkler systems used inside any sauna room should be properly rated for sauna room temperatures.

Do not pour chlorinated pool or spa water on heater. Excessive water use on heater may cause damage and void warranty.

Electric Shock Hazard - high voltage exists within this equipment. There are no user serviceable parts in this equipment. All installation and service to this equipment should be performed by qualified licensed personnel in accordance with local and national codes.

Do not construct sauna room so as to restrict air flow through the bottom of the heater.

Packaging the rocks too tightly may cause the heater high limit switch to trip.
Diagram 3

Sensor protective cover. Locate bottom of sensor 5' from ceiling directly above center of heater. (See diagram 5.)

(2) #14 wires and Ground AWG 90°C wire to control.

Screw control box to 2x4 blocking stud.

Note: if sensor wire is exposed on surface of the sauna wall cover with wooden molding.

Room light outlet box 70 inches up from floor. Do not locate directly over heater.

Temperature control box. Face out from sauna room five feet up from floor.

Optional separate light circuit if control light is used.

Diagram 4

One hour operating zone for 9 hour delay timer

This area from "OFF" to "ON" is the operating zone. This is the only time the heater is on.

Delay zone

This area from "9" to "ON" is the delay zone, meaning the heater can be programmed to come on up to nine hours later. The heater will not operate in this area.

Diagram 5, continued

Control circuit wire.

2x4 blocking for bracket mounting.

Flex conduit. Provide three feet into room during rough-in.

Power input to heater.

Back of sensor

Insert screwdriver tip here to unsnap sensor cover from sensor.
Section 7: Operation

The heater is intended for use with a SC-9, SC-60, or SC-CLUB Control Panel only. Use with any other control voids the warranty and UL listing. For health and fire safety, never attempt to alter or bypass the timer or thermostat. If the sauna is to be used without an automatic timer provided, (Model SC-CLUB Control Panel) an attendant must be present at all times.

MODEL SC-9 CONTROL PANEL, UL number 19-8-1517 (9 Hour Delay 1 Hour Operation Option) This control is equipped with a 60 minute timer with a 9 hour delay, an electronic thermostat, a light switch, and a pilot lamp that indicates when the heater is on.

SETTING THE TEMPERATURE: The temperature can be adjusted by turning the thermostat knob. To raise the temperature, turn the knob clockwise; to lower the temperature, turn the knob counter-clockwise.

SETTING THE TIME: If you want the heater to begin heating immediately, turn the dial clockwise past the first marked section labeled “off to 1” (See Diagram 4), then turn the dial back (counter-clockwise) until you feel it “click”, near the on position, into the one hour operation zone.

The heater has a “9 plus 1” timer, which means you can set the heater to begin heating after a delay of up to 9 hours. If you set the timer dial in the “1 to 9” zone, the heater will automatically turn on after the selected delay time has elapsed.

LIGHT SWITCH: Use the light switch to turn on the sauna room light on and off.

MODEL SC-60 CONTROL PANEL, UL Number 19-8-1817 (60 minute timer) This control panel has a 60 minute timer, an electronic thermostat, a light switch, and a pilot lamp that indicates when the heater is operable.

SETTING THE TEMPERATURE: The temperature can be adjusted by turning the thermostat knob. To raise the temperature, turn the knob clockwise; to lower the temperature, turn the knob counter-clockwise.

SETTING THE TIME: Use the timer to turn the heater on. To start the heater, turn the timer knob clockwise to the desired time setting. Maximum operating time is one hour.

LIGHT SWITCH: Use the light switch to turn on the sauna room light on and off.

WARNING

Do not locate benches over heater. Minimum clearance of ceiling above heater 44”.

Minimum clearance from heater to wooden surfaces (benches, side walls, heater fence, etc.) 2 inches. Mounting brackets supplied. Provides proper clearance from wall behind heater.

Use only copper wire of the size and type indicated in the Heater Specification Chart and the temperature rating on the heater junction box.

All heaters and controls must be grounded per NEC to prevent electrical shock in case of unit failure.

Electrical outlets or receptacle must not be installed in a sauna room.

A guardrail or fence is required around the heater to prevent burns from accidental contact.

SC-60 Control Panel (UL# 19-8-1817)
Installation and Operating Instructions

Section 7: Operation, Continued

MODEL SC-CLUB CONTROL PANEL, UL number 19-8-17 (Attendant Present Control, thermostat Only) This control panel has a main on/off switch, an electronic thermostat, and a sauna light switch. A pilot lamp in the main on/off switch indicates when the sauna heater is on; and a pilot lamp in the sauna light switch indicates when the sauna light is on.

SETTING THE TEMPERATURE: The temperature can be adjusted by turning the thermostat knob. To raise the temperature, turn the knob clockwise; to lower the temperature, turn the knob counter-clockwise.

TO START: To start the heater, turn on the main switch. To stop the heater, turn the main switch off. This control panel is made for commercial use with an attendant present to monitor the sauna bather’s safety.

LIGHT SWITCH: Use the light switch to turn the sauna room light on and off.

Section 8: High Limit Control (Reset Button)

The sauna heater has a built-in high limit control, which automatically turns off the heater if the temperature inside the sauna room rises to an abnormally high level.

To restart the heater, let the heater cool and turn the timer down to zero (off), then push the reset button on the bottom of the heater, see Diagram 1. If the high limit continually shuts off the heater, contact a service representative.

Section 9: How to take a Sauna

- Dress when completely dry and perspiration has stopped.
- Some sauna bathers enjoy the soothing effect of steam by splashing water on the heated sauna rocks. Use only one dipper full (approx. 1/2 cup) at a time and take care to keep clear of the steam as it rises off the rocks.
- Do not smoke, exercise or drink alcoholic beverages in the sauna room.
- Do not pour chlorinated pool or spa water on the heater or corrosion damage may result.

- When taking a sauna, allow time to relax completely.
- Remove clothing and jewelry...if required, wear a towel loosely.
- After 10 minutes or when perspiration begins, leave sauna and relax in dressing area...follow with a cool shower.
- Cooling time should equal time spent in sauna. Enter sauna room again and stay 5 or 10 minutes.
- Repeat the cycle 2 or 3 times; end with a brisk shower...rinse in cool water.

- You liked it? Do it once again and you will feel great.

Shower

Sauna (10 - 15 min.)

Rest (10 - 15 min.)

Shower or swim

Relax with juice or water

**Diagram 9**

**Ventilation**

Locate vent under the top bench

**Diagram 10**

**Incorrect Placement of Rocks**

- Rocks between the front element and the outer wall will reduce cycling of the heater.

**Instructions**

1. Put smaller rocks in first around the outer perimeter of the heating chamber.
2. Completely fill all four sections (front, 2 center sections between elements, and back).
3. In the outer sections, use smaller rocks placed more tightly (see note b).
4. Place rocks loosely in the center 2 sections (see note a).
5. Be sure rocks completely cover the elements (see note c).
6. Loosely cover the tops of all elements a minimum of 2” to 3”. 
Installation and Operating Instructions

Section 10: Warning Placards

Two metal placards are included in the Installation Instruction Envelope packaged with every Nordic Sauna Heater. The CAUTION placard must be attached to the interior wall of the sauna room directly above the heater where it is visible to the bather. The WARNING placard must be attached to the door of the sauna room.

Section 11: Room Construction

For safety and reliability, the following rules must be addressed.

- No permanent locking or latch system is to be used on the sauna door.
- Acceptable door fittings are: magnetic catches, friction catches, spring or gravity loaded closures. The door must always open outwards.
- No shower may be installed in a sauna room.
- No electrical receptacle shall be installed inside the sauna room.
- The enclosed WARNING: Reduce the risk of overheating... warning plate must be mounted on or alongside the door outside the sauna room at or about eye level.
- The enclosed CAUTION: Reduce the risk of fire... caution plate must be mounted on the interior wall above heater.
- The heater should not be operated without its container properly filled with rocks and the rock guard in place.
- If an intercom speaker is installed, it should be away from the heater and as close to the floor as possible.
- If a room light is installed, it should be a surface mounted bracket type. Wall mounted lights should be about 70" above the floor. Ceiling mounted lights should be of an approved type with a junction box that is remote to the fixture itself. Use only a fixture that uses A.F. or fixture type internal wiring. A 60 watt bulb should provide sufficient lighting.
- Fire sprinkler systems installed inside any sauna room should be properly rated for the sauna room temperatures.
- Always mount the heater according to these installation instructions.

WARNING

The “CAUTION” and “WARNING” placards must be mounted in accordance with Section 10.

For safety purpose sauna door must open out and not lock.

Never use a wood stain, seal or preservative on the inside of your sauna room.

Light fixtures get very hot during operation. Locate light fixture where it will not be a burn hazard.
**Section 12: Ventilation**

VENTILATION In a sauna, the air should be changed about 6 times an hour. This can be achieved by making a vent opening (fresh air inlet) in the sauna wall directly below the heater. The air outlet must be lower than the sauna wall directly below the heater. The air outlet must be lower than the upper benches, as far as possible from the heater and about two feet higher than the fresh air inlet vent, see Diagram 9.

It is recommended that ventilation openings meet the requirements of UL Specification 875. The minimum opening should be determined using one of the following formulas:

\[
\begin{align*}
\text{For } R < 31, & \quad V \geq 9.3 \\
\text{For } R \geq 31, & \quad V \geq 0.3R
\end{align*}
\]

Where \( R \) = the floor area of the room in square feet and \( V \) = the minimum vent size in square inches

**Section 13: Maintenance**

The sauna, like a bathroom, should be kept clean and odor free.

Towels or mats should always be used on benches and floor as perspiration otherwise penetrates the soft wood.

Air out the sauna often by keeping the door and vents open when the sauna is not in use. Saunas that are in daily use should be washed down at least once a week to keep them clean and the air fresh. Duckboard should be removed from the sauna, the sauna floor mopped and dried in a conventional manner, and the duckboard thoroughly scrubbed and dried before returning to the sauna room. The sauna heater should be wiped down occasionally with a damp cloth to remove lint and dust. The rocks should be removed once a year for cleaning and small or crumbled rocks replaced.

To clean and remove perspiration stains, use soap or detergent in warm water, best applied with a scrub brush. Badly soiled surfaces may require sanding. Sand paper wrapped around a wooden block works well.

**Section 14: Troubleshooting**

For troubleshooting or service questions call 1-800-300-7286 and ask to speak with service. Prior to calling, please have the Model and Type number available. You may also email us at techsupport@sauna.com.
